

TP 32R

TP 32R is a roofing sheet with a distinct top and bottom profile, featuring an extra raised section in the bottom wave. This provides a stronger profile compared to TP 32. The classic design makes it suitable for both renovation projects and new constructions. TP 32 is available in multiple thicknesses, making it ideal for applications requiring a more robust roofing sheet.

The sheet includes a water lock in the side overlap, preventing water infiltration. Suitable for most roofs with a slope of at least 14 degrees.

- Available in full lengths up to 8 meters, reducing the number of joints.
- Additional profiling in the bottom profile increases the sheet's strength.
- Quick and easy installation, allowing you to complete the job faster.
